CAREER OBJECTIVE

Hi, I'm Shaik Afsheen, an aspiring AI & ML Engineer and Data Analyst, and a B.Tech student at Dayananda Sagar University. I enjoy transforming ideas into real-world solutions through AI, machine learning, data analysis, and software development. Passionate about continuous learning, innovation, and problem-solving, I'm currently looking for internship and full-time opportunities to learn, contribute, and grow.

EDUCATION

B.Tech, Computer Science Engineering (AI & ML) — Dayananda Sagar University, Bengaluru, Karnataka

CGPA: 7.83 | Expected Graduation: 2027

XII, State Board — Shri Gnanambica Junior College — 86.00% — 2023

X, State Board — Sree Bhuvana Vidyalayam High School — 95.00% — 2021

SKILL SET

Programming: Python, SQL, Data Structures & Algorithms

ML & Data Science: Pandas, NumPy, XGBoost, Random Forest, Logistic Regression, EDA

AI / LLM: Retrieval-Augmented Generation (RAG), Embeddings, Local LLMs (Ollama), Deep Learning

Data Analytics & BI: Power BI, Tableau, Microsoft Excel, Matplotlib

Tools: Git, GitHub, Jupyter Notebook, Streamlit

ACADEMIC PROJECTS

LoanSense AI — Explainable Loan Approval Prediction | Python, Scikit-learn, XGBoost, SHAP, LIME

- Built and compared Logistic Regression, Random Forest, and XGBoost classifiers to predict loan approval from applicant financial and demographic data, with preprocessing and EDA in Pandas/NumPy.
- Integrated SHAP and LIME to generate global and instance-level explanations for model predictions, improving interpretability for credit-decision use cases.

Cognify — AI Learning Platform (RAG Prototype, In Progress) | Python, RAG, Ollama, Streamlit

- Built a working RAG pipeline — PDF ingestion, text extraction, chunking, and embeddings — to retrieve relevant context from uploaded study material before generating answers.
- Integrated a locally hosted LLM (Ollama, Qwen2.5) to power an AI tutor with conversation memory and automatic practice-question generation, served through a multi-section Streamlit app.

E. coli Antibiotic Resistance Prediction | Python, Scikit-learn (Research Project)

- Compared five classification algorithms — Logistic Regression, Random Forest, XGBoost, SVM, and KNN — with cross-validation to predict antibiotic resistance in E. coli, evaluated via accuracy, F1-score, and ROC-AUC.
- Research accepted for presentation at ICONAT 2026, titled "Supervised Learning-Based Approach for Early Detection and Prognosis of Antibiotic Resistance in E. coli Pathogens."

CERTIFICATIONS

- Machine Learning Using Python — Simplilearn
- Foundations of Deep Learning: Concepts and Applications — NPTEL
- Data Analytics Essentials — Cisco
- SQL and Relational Databases 101 — Cognitive Class

ACHIEVEMENTS

- Research paper, "Supervised Learning-Based Approach for Early Detection and Prognosis of Antibiotic Resistance in E. coli Pathogens," selected for presentation at ICONAT 2026.
- Participated in a college-level Prompthon (AI prompt engineering event), working with tools such as GitHub Copilot.

HOBBIES & INTERESTS

- Digital content creation & visual design
- Creative writing & journaling
- Fitness & wellness
- Painting & handmade craft work
- Exploring historical events and civilizations
